                                                                                                                                                                                                        The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, towning, suffocation, perinatal as physia, or hypoglycamenic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystenia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromuscular blocking agent; neuroprotective; pain; cerebroprotective; anticonvulsant; antiaging; antidiabetic; cardiovascular; vasotropic; cardiant; tranquilizer; antimigraine; neurodegenerative disease; neuromuscular disorder.
                                                                                                                                 New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as neuroprotective agents
                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducting neurotoxic injury associated with hypoxia, a noxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as physia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromusular blocking agent; neuroprotective; pain; cerebroprotective; anticonvulsant; antiaging; antidiabetic; cardiovascular; vasotropic; cardiant; tranquilizer; antimigraine; neurodegenerative disease; neuromuscular disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders unch as amyotrophic lateral sclerosis, neuroamscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuroamscular disorders, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystohia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
                                                                                                                                                                                                                                                             voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mu-conopeptide; snail: venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromuscular blocking agent; neuroprotective; pain; cerebroprotective; anticonvulsant; antiaging; antidiabetic; cardiavascular; vasotropic; cardiant; tranquilizer; antimigraine; neurodegenerative disease; neuromuscular disorder.

                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated in channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neurolgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.

                                                                                                                                                The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, post-herpetic neuropathy, ior reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypodlycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromuscular blocking agent; neuroprotective; pain; cerebroprotective; anticonvulsant; antiaging; antidiabetic; cardiovascular; vasotropic; cardiant; tranquilizer; antimigraine; neurodegenerative disease; neuromuscular disorder.
                         New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and

These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuroamscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post herpetic neuralgia, neuroamscular disorders, burn pain, epilopsy, for reducing neurotacic neuralgia, neuroamscalpiny associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as physia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence
                                                                                                            voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromuscular blocking agent; neuroprotective; pain; cerebroprotective; anticonvulsant; antiaging; antidiabetic; cardiavascular; vasotropic; cardiant; tranquilizer; antimigraine; neurodegenerative disease; neuromuscular disorder.

Ξ,
                                                                                                                                       The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, post-herpetic neurodia, neuronal pain and phantom limb, burn pain, or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, trowning, suffocation, perinatal as physia, or hypodypacamic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.

ion channels. These may include neurodegenerative disorders such as severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, mycoradial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                           The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated
voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as

                                                                                                               The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, perilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mu-conopeptide, snail; venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromuscular blocking agent; neuroprotective; pain;

                                                                                                                                                                                                                                   The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders unch as amyotrophic lateral sclerosis, neurogenerative disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuroans pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxial, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence
                                                    voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as neuroprotective agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as

                                                         The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuroamscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuroamscular and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypolycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as

amyotrophic lateral sclenosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuromuscular disorders, post-operative or spilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypodyzeamic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystohia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                 The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as

voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as New mu-conopeptides useful for treating disorders associated with

neuroprotective agents

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as Claim 1; Page 84; 231pp; English.

These may include neurodegenerative disorders such as, amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain,
amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or
             servere chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neurolaia, neuronal pain and phantom limb, burn pain, pepilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromuscular blocking agent; neuroprotective; pain; cerebroprotective; anticonvulsant; antidiaging; antidiabetic; cardiovascular; vasotropic; cardiant; tranquilizer; antimigraine; neurodegenerative disease; neuromuscular disorder.
